

Chris Nappi

**Design Lead
@ Think Company**

Product design leader who brings order to complex enterprise products and the systems behind them.

I stabilize messy processes, lead teams, build scalable systems, strengthen cross-functional collaboration, and stay close enough to the craft to contribute hands-on UX when needed.

My superpower is mastering emerging technologies, from Figma to AI, and turning them into practical workflows that help teams move faster without losing sight of the user.

Think Company

Design Lead | 2025–Present

Principal Experience Designer | 2022–2024

Senior Experience Designer | 2020–2022

Experience Designer | 2018–2020

Design Systems

- Architected Meevo's three-tier design system across global UI, staff-facing, and client-facing patterns, with 400+ variable bindings, light and dark token collections, a governance model, and documentation standards.
- Kept the system's AI-generated coded implementation aligned with its Figma source of truth, auditing tokens and components across the design-to-code boundary.
- Built design systems from zero at Comcast Business and The Philadelphia Inquirer, architected Newell's white-label system, and contributed to two more at Merck and Comcast Xfinity.
- Won design-system investment with a milestone-based readiness model that showed stakeholders what the work required, which the client adopted as its own standard.
- Built the engineering relationship into every system I've led, through standing syncs, component-level alignment, and pre-QA review. Meevo went from no direct communication to an estimated 80% drop in implementation questions.

Design Leadership & Consulting

- Led UX strategy, design execution, and team operations across Meevo's multi-phase enterprise redesign: seventeen months and five consecutive contract renewals, operating as the client's embedded design department.
- Grew a design team from 2 to 6, coached six designers into owning workstreams I had designed myself, and led the group's critiques, quality bar, and AI adoption.
- Led design strategy for Comcast's in-house point-of-sale system, stepping into a leadership gap mid-project and carrying it through to completion as project lead.

Enterprise Product Design

- Designed complex enterprise workflows across telecom, pharma, e-commerce, retail, and SaaS, from network management to secure content portals and point-of-sale.

Think Company (cont'd)

AI-Enabled Design Operations & Tooling

- Established an AI-assisted design ops framework in a shared GitHub repository, with agentic workflows for UX strategy, documentation, and research synthesis, built around a knowledge server giving the team's AI access to 950+ project documents and 362 recorded decisions.
- Trained the client's development and QA organizations on Figma, roughly 40 to 50 people across three workshops; QA adopted it as their standing surface for talking to design.
- Used AI coding tools to turn designs into working prototypes for flows Figma can't represent, deploying them to live URLs where stakeholders and users tested real behavior before build.
- Drove Figma adoption and process standardization across Comcast Business, Merck, Newell Brands, and Meevo, including Newell's Sketch-to-Figma migration and white-label design system proven on Marmot.com, and Merck's Vivid360 library rebuilt in Figma for its first product.

Drexel University

Adjunct Professor of Interactive Digital Media (IDM 215) |
September 2023 – Present

- Teach a 200-level UX course guiding 15–20 students through research, IA, wireframing, prototyping, usability testing, and final product storytelling.
- Redesigned course materials and in-class activities to better reflect modern UX practice, team-based product work, and industry expectations.

The Philadelphia Inquirer

Product Design Lead | 2022–2023

- Rebuilt the Figma org, file structure, and end-to-end UX process in six months, training four designers with little UX background to full proficiency in three.
- Established the company's first design system using a federated, atomic model across foundations, components, and web/native mobile patterns.
- Rolled Figma out beyond the design team (developers, product, a second design department) and introduced governance rituals across the whole org.
