

Chris Nappi

Design Lead @ Think Company

Product design leader who brings order to complex enterprise products and the systems behind them.

I stabilize messy processes, lead teams, build scalable systems, strengthen cross-functional collaboration, and stay close enough to the craft to contribute hands-on UX when needed.

My superpower is mastering emerging technologies, from Figma to AI, and turning them into practical workflows that help teams move faster without losing sight of the user.

Think Company

Design Lead | 2025–Present

Principal Experience Designer | 2022–2024

Senior Experience Designer | 2020–2022

Experience Designer | 2018–2020

Design Systems

- Architected the design system for Meevo, an enterprise booking and point-of-sale platform for salons and spas: a three-tier atomic structure from atoms to organisms, the token architecture beneath it, and the documentation and processes designers and developers worked in, all to WCAG 2.1 AA. Up to 8 designers, 20+ developers, and at least 4 product owners built against it.
- Reconciled an AI-generated coded implementation with its Figma source of truth, auditing tokens and components across the design-to-code boundary and versioning the system back into alignment.
- Established a milestone-based design-system readiness model that showed stakeholders what the work required and won funded investment, which the client adopted as its own standard.
- Built design systems from zero at Comcast Business and The Philadelphia Inquirer, architected Newell's white-label system, and contributed to two more at Merck and Comcast Xfinity.
- Paired design and engineering through standing syncs, component-level alignment, and pre-QA review, making cross-department governance part of the system rather than a process beside it. Meevo went from no direct communication to an estimated 80% drop in implementation questions.

Enterprise & Regulated Product Design

- Designed Merck's formulary resources portal, where healthcare professionals find and request confidential drug resources, from the post-login dashboard through the library and request flows, under weekly pharma legal review that repeatedly forced full-page redesigns.
- Ran OOUX and content-modeling workshops on engagements where design and content had stopped being able to read each other's work, producing a shared object model that unblocked both for the rest of the project.

Think Company (cont'd)

AI-Enabled Design Operations & Tooling

- Established an AI-assisted design ops practice with agentic workflows for UX strategy, prototyping, documentation, and research synthesis, running on a shared knowledge base of 950+ project documents and 362 recorded decisions that the whole team could query and extend.
- Deployed coded prototypes to live URLs for flows Figma can't represent, where stakeholders and users tested real behavior before build.
- Drove Figma adoption, process standardization, and training across five client engagements and inside Think Company itself, reaching design teams, developers, and whole QA organizations.

Design Leadership

- Led UX strategy, design execution, and team operations across Meevo's multi-phase enterprise redesign as the client's embedded design department: seventeen months and five consecutive contract renewals on one product.
- Ran a design group as it scaled from 2 to 6 designers, coached three of them into owning workstreams I had designed myself, and set its critiques, quality bar, and AI adoption.
- Stepped into a leadership gap mid-project to lead design strategy for Comcast's in-house point-of-sale system, carrying it through to completion as project lead.

Drexel University

Adjunct Professor of Interactive Digital Media (IDM 215) |
September 2023 – Present

- Teach a 200-level UX course guiding 15–20 students through research, IA, wireframing, prototyping, usability testing, and final product storytelling.

The Philadelphia Inquirer

Product Design Lead | 2022–2023

- Rebuilt the Figma org, file structure, and end-to-end UX process in six months, training four designers with little UX background to full proficiency in three.
- Established the company's first design system using a federated, atomic model across foundations, components, and web/native mobile patterns.
